
Hospitalisation— Robotic Prostatectomy

Frequently Asked Questions

This information leaflet is designed to let you know what you can expect during your stay. This is however, only a guide and your progress may vary from this outline. Please read this information and if you have any questions or concerns at any time, please discuss these with Dr Campbell.

Going to Hospital, and in particular being admitted for a procedure can be a threatening and stressful situation. We appreciate the anxiety that you might be feeling and in order to make the situation less stressful we have designed these leaflets which hopefully will give you a better understanding of what to expect when you have a procedure.

How long will I be in hospital?

The expected length of hospital stay is up to 2 nights.

If you have any concerns about your ability to cope after your surgery, please discuss this with the nursing staff on admission to hospital.

Community services can be arranged if required, but please note they are not always readily available and not all patients are eligible for funded services.

Please bring your medications and any x-rays relevant to your surgery into hospital.

Please take your bowel preparation as directed by your Doctor. Please ensure that you drink plenty of fluids up until your fasting time.

After surgery your pain will be controlled effectively with medication.

Prior to discharge, your wound will be clean and dry and continuing to heal. You will have resumed your normal diet.

What happens after I get to the hospital?

You will be taken to the Day of Surgery Lounge where a Nurse will complete a medical history if this was not completed prior to your admission.

Your temperature, pulse, blood pressure and weight will be checked.

If you take regular medication, you will continue to do so throughout your stay unless otherwise instructed by Dr Campbell.

If you have any questions about your surgery or hospitalisation please ask your Nurse or Dr Campbell

What happens before the procedure?

You should not eat or drink for six hours prior to surgery

You should have showered prior to coming into hospital. Please advise your Nurse if you have not done so

If you have been taking blood-thinning or anti-inflammatory medication (such as warfarin, aspirin, or alternative medicines), please advise your Nurse

You will be dressed in a theatre gown and disposable underwear. Compression stockings will be applied to your legs.

You may have a blood test, heart tracing or x-ray taken before your surgery.

The Anaesthetist may visit you before you go into surgery

Dr Campbell will visit you before the procedure.

What happens after the procedure?

If requested Dr Campbell will ring a family member to notify them of the outcome of your procedure.

~ You will be taken to the ward on your bed

~ Your Nurse will check your temperature, pulse, blood pressure, wound dressings, pain level and urine output.

~ An intravenous drip inserted during surgery will keep you hydrated

~ A urinary catheter inserted into your bladder during surgery, will help you pass urine easily. This should be taped to your

leg at all times

- ~ You can have regular medication for pain. It is important that you tell your Nurse if you have pain
- ~ A drain inserted into your wound will assist to remove excess fluid and a dressing will cover the wound
- ~ You will be required to rest in bed on the day of your surgery
- ~ Nursing staff will help you with your hygiene and toileting needs
- ~ You may be able to have sips of water/ice after surgery, on Dr Campbell's orders. Please check with your Nurse before you have anything to eat or drink.

What happens the day after surgery?

~ The urology team will visit you daily.

Please remain in your room and attend to your daily morning hygiene after this morning ward round.

- ~ Nursing staff will continue to check your temperature, pulse, blood pressure, wound, urine and pain level regularly
- ~ You can have regular medication for pain. It is important that you tell Nursing staff if you have pain
- ~ You will be encouraged to drink about 2 litres of fluid per day
- ~ Your wound dressing will be checked and dressing changed as required
- ~ Your drain will be removed when instructed by Dr Campbell
- ~ You will be discharged home with your catheter in. An outpatients appointment will be made with the Continence Nurse for removal of the catheter.
- ~ The Physiotherapist will meet with you to ensure you are mobilising and continuing with exercises that will help improve your recovery. You will be required to sit out of bed each day
- ~ Nursing staff will help you with your hygiene and toileting needs, as required
- ~ Normal bowel habits are sometimes disrupted after surgery. Your Nurse can offer advice on ways to resolve this common problem, if you are concerned.

What happens on the day of discharge?

~ The urology team will visit you today.

Dr Campbell may visit you today

- ~ Medication will be dispensed by the Pharmacist, if required
- ~ If you have a drip in your arm it will be removed before you go home
- ~ Arrangements for a follow-up appointment and wound care

- instructions will be explained to you before you go home
- ~ You will be provided with a catheter leg bag and overnight drainage bags
- ~ Discharge time is 10am. Please arrange for someone to collect you by this time

Discharge Advice Following Prostate Surgery

Please Note: You may experience some blood-stained urine in the first couple of weeks after surgery. However, if bleeding becomes heavy, please contact Dr Campbell.

You should

Take medication to control any discomfort, as prescribed

Contact Dr Campbell if you begin to feel unwell or start to experience increasing pain, swelling or bleeding around your wound, or if you feel that your catheter is not draining urine.

Ensure the catheter is taped to your leg at all times

Shower as usual unless instructed otherwise. Your wound may have a dressing applied. You can remove this as instructed by Dr Campbell.

Continue with the exercises that the Physiotherapist has shown you

Remember that you may feel tired easily for the first few weeks after you go home, so get plenty of rest and eat a well balanced diet.

You should avoid, for at least six week period

Heavy lifting or straining after you go home. For example shopping, gardening, or playing golf. Recommence driving when you can perform the emergency brake procedure normally.

What else should I look out for?

If you develop a fever, severe pain on passing urine, inability to pass urine or worsening bleeding, you should contact Dr Campbell on (07) 3367-1608, or your family doctor since you may require treatment with antibiotics and/or the temporary passage of a catheter. For after hours emergencies Dr Campbell can be contacted on (07) 33671608.

The Wesley Hospital Emergency Centre (07) 3232-7333, and The Greenslopes Private Hospital Emergency Centre on (07) 3394-7111 are other resources that are also available.

Are there any other specific points?

Your referring doctor will be sent a report of the procedure and all biopsy reports. You will be asked to make a follow-up appointment after the procedure to discuss any further treatments. Additional or alternative treatment may, however, be recommended at the time of discharge.
